

K2 KeyAuditor & KeyServer

Mac, Windows, Linux, Solaris ~ Datacenter, Desktop, Virtual, Cloud.

Comprehensive discovery, normalized product recognition, automated reconciliation, compliance and optimization.

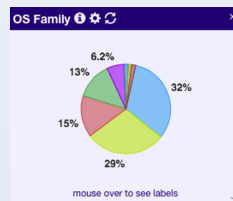

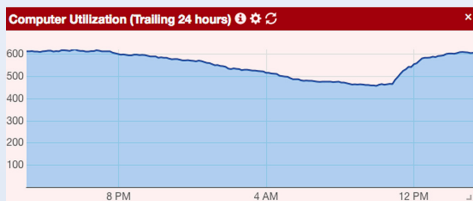

Sassafras Software - an ITAM technology pioneer for over 25 years.

Software Asset Management

Automatically Analyze Licensing for Compliance & Optimization

K2's Dashboard quickly identifies software overspend and potential liabilities so you can reduce compliance risks, reclaim unused software, and reduce spending. K2's unique combination of purchase records and license Policies allows reconciliation of Datacenter & Desktop software product licensing against deployment and consumption. K2 provides detailed actionable data for compliance reporting, license optimization and cost reduction.

Active License Management

K2's unique license Policies will measure or enforce common Datacenter & Desktop software licenses.

Software Asset Management

K2 employs a unique Policy-driven approach to Software Asset Management. K2 offers powerful options that are not found in other SAM tools.

Discovery and Inventory

K2 discovers all software. Then Sassafras' Product Recognition Service matches discovered software to normalized product titles.

"Sassafras is one of the few suppliers who are always there when we need them and you are just as eager to help now as when we first purchased the software."

– Sonia Davies Univ. of South Wales

Entitlement Tracking

K2 tracks license entitlements from purchase to retirement. K2 reconciles software product licensing against deployment and consumption, providing insight into compliance, optimization and cost reduction.

Web Dashboards and Reporting Console

K2 delivers key metrics in customizable dashboards in your browser. Dashboards link to detailed reports, which can be further customized to extract exactly the information you need. K2 data can integrate with procurement, help-desk, and other IT management systems.

Role & Scope Specific IT Asset Management

K2's federated team support allows a system wide IT administrator to divide computing assets into managed sections. A fully-privileged administrator can manage all assets while role- and scope-specific admin accounts have defined access to specific tasks and departmental assets.

"I recommend K2 highly to any organization that needs to control software costs."

– Michael Alves, IBM Global Services

K2 KeyAuditor & KeyServer

PRODUCT BRIEF

K2 was voted by ITAM managers as the #1 Top Rated ITAM Solution on ToolsAdvisor.net where it has held that position since the rating website's inception. Winner of the coveted CODiE Award for "Best Asset Management Solution," Sassafra K2 is an innovative SAM/ITAM tool that has been in the marketplace for over 25 years.

Today, K2 is in use on millions of computers around the world in corporate, government and academic organizations, saving hundreds of millions of dollars and contributing to trustworthy, standards based SAM/ITAM management practices.

Recent Version Highlights

- Manage Core, CPU, and PVU licensing
- Admin Journals & Alerts
- Software Product Recognition Service
- New Dashboards for many uses
- Scope Specific Administrative Roles and Accounts management
- Track Software Purchases, Upgrades, and Current Entitlement Positions
- Find Software Compliance Liabilities and Overspends for Cost Reduction
- Computer Availability Maps
- Integrated Javascript API
- Record tagging and reporting

Supported Hosts & Clients

Windows, Macintosh, NetWare, Solaris, Linux, WTS/Citrix, Virtual Environments

K2 - KeyAuditor & KeyServer

Software Asset Management (SAM) & IT Asset Management (ITAM)

Discovery

- Hardware identification, software inventory, configuration reports: OS details, hardware configuration profiles, computer asset tag, location data, and much more
- Complete software inventories: identifies hundreds of thousands of software programs
- Automatic, incremental delta audits and configurable reports
- Supports Windows, Macintosh, Linux, Solaris, Citrix, WTS, and Virtual Environments

Normalization

- Identifies major/minor releases. Automatically includes discoveries into existing management policies
- Cloud based Software Product Recognition transforms discovered assets into Normalized Products
- Trustworthy software audits report actual installs, not unreliable data from Add/Remove Programs

Entitlement Tracking

- Purchase data can be imported or manually entered
- Current License Position is automatically calculated using new and upgrade purchase data
- Purchase Documentation storage and retrieval
- Alerts for Contract and Subscription renewals

Active License Policy Management

- Central management of software licenses
 - Per-device (node) licenses
 - Named User licenses
 - Subscription licenses
 - Datacenter licenses (Core, CPU and PVU)
 - Concurrent use (floating) licenses
- Configurable to Manage, Observe, Deny, or Ignore each software product version
- Deny access to unauthorized software, computers, or end-users
- Schedule access and reservations
- Manage multiple User-groups and organizational Divisions
- Reclaim/redeploy abandoned software licenses

Software License Cost Reduction

- Track Software Purchases, Version Upgrades, and Current Entitlement Positions
- Reconcile Licensing against Deployment, Consumption, and Usage
- Optimize Software Licensing and Reduce Costs
- Identify under-used and wrong-sized purchases (e.g. suites installed when a point product is enough)

Extensive Built-in and Customizable Dashboards & Reporting

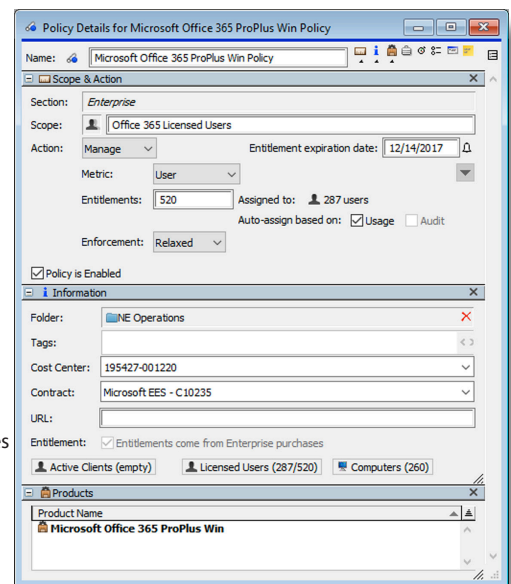

- Web-based and Console-based reporting
- Dashboards for Compliance, Cost Reduction, Hardware Asset Mgmt, and more
- Hundreds of built-in SAM / ITAM reports
- Extensive compliance & optimization analysis
- ODBC-compliant customizable external reports
- Report scheduling, RSS feeds, and Administrative Alerts

Management by Role & Scope with Alerts & Journals

- Roles specify extent of configuration each admin can perform
- Scope defines the assets that can be managed by each Admin
- Significant configuration changes are journaled
- Misconfiguration and time sensitive events trigger Alerts

Integration with other IT Management Tools

- Import purchase data from central procurement or from locally managed files
- Integrate computers with other systems by SCCM Resource ID or UUID
- Export/merge, display, and report K2 data in other SAM/ITAM tools
- Supports all common network authentication services
